

Lend and borrow onchain without putting your balance sheet on display

The first encrypted decentralized lending protocol, built for institutions.

SELECTIVE VISIBILITY

Public markets. Private positions.

**Lenders****Earn yield**

Your deposits and returns

Only visible to you**Borrowers****Access credit**

Your collateral, debt, and health

Only visible to you**Users****Market aggregates**

TVL, rates, and utilization

Visible to everyone**Liquidators****Liquidate**

LTV ranges, unlinked to borrowers

Visible to liquidators

CRYPTO ARCHITECTURE

**Solana**Shared
execution**Encrypt.xyz**Encrypted
computation**Ika**Threshold
decryption**Hammock**Lending
programs

Our vision: Tokenize, encrypt, and leverage anything.

Our first market is SOL/USDC, with more assets to follow. We aim to encrypt stablecoins, real-world assets, and native assets from Bitcoin, Ethereum, Canton, and beyond on Solana.

ACCESS ROLLOUT
